**Gainesville Industrial Electric Co. (GIE)** is a family-owned and operated business proudly serving the Southeast since 1959. Founded by C. H. and Ruth Raines as a small motor repair shop, GIE has grown over three generations into one of the largest stocking independent motor distributors in the state — while preserving the values and personal service that built our reputation.

Today, GIE supplies a full range of industrial electric motors, pumps, and electrical accessories, backed by a comprehensive EASA-approved repair facility. As an authorized factory warranty center, we stand behind every product we sell — ensuring customers receive reliable solutions and long-term value.

With an average of more than 20 years of industry experience, our knowledgeable team takes pride in helping customers find the right products for the job. We provide technical support, application assistance, and quick access to the parts and equipment you need to keep operations running. For urgent situations, we offer 24-hour emergency service, delivery options, and same-day shipping to help minimize downtime.

While most of our business is rooted in serving customers throughout Georgia and the Southeast, our reach extends nationwide — and our commitment to service remains the same wherever you are. We believe in building strong, lasting relationships with both our customers and our vendor partners. That focus is why businesses continue to trust GIE as their go-to industrial partner, decade after decade.
